

Don't Lose Sight of Glaucoma! Look Into Your Dog's Eyes Daily.

WARNING SIGNS OF GLAUCOMA:

Redness • Bulging • Frequent Blinking • Cloudiness • Rubbing Eyes • Head Shaking

These signs could be symptoms of pressure inside the eye rising and damaging the optic nerve which can quickly lead to blindness. **If you see these signs immediate action must be taken. Take your Bouvier to an ER/ Ophthalmology Center without delay.** Don't assume it's allergies.

And here's a bonus! Research shows that you and your dog have an increase in oxytocin levels (the attachment/love hormone) from mutual gazing. So look into your dog's eyes daily!
